CAREER OBJECTIVE

A developer with hands-on experience building and deploying production React applications for real clients and live platforms. Proven ability to design responsive, component-driven UIs, integrate REST APIs, and deliver features under tight deadlines. Experienced in collaborating across full-stack teams and adapting quickly between frontend and backend tasks. Seeking a frontend role where I can contribute React expertise to meaningful products.

WORK EXPERIENCE

Frontend Developer (Client Project), *BookMyTest Jan 2025 – May 2025*

- Built and shipped responsive UI components for a live deployed test-booking platform (bookmytest.com.np ) serving real users
- Implemented JWT-authenticated user flows login, registration, and protected route handling in React
- Improved user interaction flows across 5+ key pages, reducing reported UI friction from client feedback
- Collaborated with a backend team via REST APIs, handled minor backend CLI tasks, and delivered features across 4 sprint cycles
- Completed the client engagement and closed with full deployment successfully.

Frontend Developer Intern, *ING Skill Academy, Jun 2024 – Aug 2024*

- Developed the Farm Designer module for FarmBot a grid-based, drag-and-drop interface with coordinate snapping built in React and Tailwind CSS
- Integrated real-time UI synchronisation between the React frontend and physical farming hardware (NVIDIA Jetson, CNC motors)
- Solved precision control challenges involving device communication and live state synchronisation
- Delivered the module end-to-end as the sole frontend contributor within a 3-month internship period
- Also built a Vending Machine UI during the internship, designed the full interface and implemented business logic for product selection and transaction flow.

PROJECTS

GadiSewa — Vehicle Parts Selling & Inventory Management System,

React, .NET (C#), PostgreSQL, EF Core, JWT, Clean Architecture, 2024 – 2025

- Led backend architecture using Clean Architecture principles with .NET 8, EF Core, and PostgreSQL
- Designed and implemented JWT authentication covering Admin, Staff, and Customer role flows across 16 graded features
- Built and integrated the full React/Tailwind frontend, consuming internal REST APIs
- Served as backend lead in a 5-person team, coordinating module ownership, Git workflow, and milestone deliverables

Coffee School Management System (FYP – Client Project), *React, .NET (C#), PostgreSQL, 2025 – Present*

- Developing a full-stack management system for a real client with live deployment planned
- Designing scalable React frontend architecture with component reusability across admin and staff views
- Integrated JWT-authenticated REST APIs and managed database workflows for real-world usage

Movie Reservation System, *React, Tailwind CSS, TMDB API*

- Built a movie browsing and reservation platform with external API integration
- Implemented dynamic UI rendering and optimized frontend performance
- Delivered within academic deadlines with functional user experience

Lost and Found Management System, *Java, JSP, JSTL, MySQL*

- Developed a structured system using MVC architecture
- Designed normalized database for efficient data handling
- Balanced development alongside multiple coursework deadlines

Payment & Expense Integrations, *React, .NET, PostgreSQL, Ongoing*

- Building reusable integration modules for eSewa and Stripe payment gateways
- Focused on simplifying financial workflows for future product use

TECHNICAL SKILLS

Frontend: React, JavaScript, HTML5, CSS3, Tailwind CSS

Backend: .C#(basic), Django (basic), REST API design

Auth: JWT Authentication (implemented across all major projects)

Architecture: Clean Architecture, MVC, System Design basics

Database: PostgreSQL, MySQL, Entity Framework Core, Normalization

Tools: Git, GitHub, VS Code, Postman

EDUCATION

Itahari International College, *BSc. (Hons) Computing*

10/2023 – 2026

CERTIFICATES

React Essential Training: LinkedIn Learning: Completed April 27, 2025

AWS Academy Cloud Foundations: Completed October 17, 2024

AWS Academy Data Engineering: Completed October 18, 2024

AWS Academy Machine Learning Foundations: Completed October 18, 2024

AWS Academy Machine Learning for Natural Language Processing: Completed November 28, 2024
